Certified CyberDefender (CCD) Syllabus

Module	Topics	Lessons
Module 1: Security Operations (SecOps) Fundamentals	Security Operations Fundamentals and CIA Triad	• Security Operation Centers (SOC) - Overview
		• Protecting Business with Efficient SOC
		• SOC Deployment Models: Dedicated vs. Virtual
		• Deploying a SOC: When to Consider?
	SOC components - tools and technologies	• Network Firewall - Protecting Communication and Data
		• Network-Based Intrusion and Prevention Systems (NIDS/NIPS)
		• Host-Based Intrusion and Prevention Systems (HIDS/HIPS)
		• Web Application Firewalls (WAFs): Protecting Web Apps
		• Endpoint Detection and Response (EDR/XDR)
		• Web Proxy Servers: An Overview
		• Understanding Vulnerability Management Process
		• Security Information and Event Management (SIEM): Core Component of SOC
		• Automating Security Incident Response with SOAR (Security Orchestration, Automation, and Response)

		• Malware Analysis: Static vs. Dynamic Approaches and Sandboxing
		• Using Honeypots and Decoys for Defense
		• Understanding Cloud Computing and CASB
		• Threat Intelligence: Mitigating and Defending
		• Using Machine and Deep Learning for Security
		• Ticketing Systems for Incident Response
		• The Importance of Asset Inventory in Security
	SOC components - people	• Organizational Chart and SOC Roles
		• Creating Effective Cybersecurity Training Plans
		• Challenges and Solutions for SOC Jobs
		• Avoiding Burnout: Tips for SOC Analysts
	SOC components - processes	• Effective Policies: Business Protection Through Documentation
		• Efficient SOC Procedures: The How-To
		• Security Standards: Compliance is Mandatory
		• Security Guidelines and Benchmarks: Best Practices
		• Perform Windows Security Assessments with CIS-CAT Lite

Module 2: Incident Response	Incident Response (IR) - Overview	• Understanding Key Concepts for Incident Response
		• Continuous Incident Response: Before, During, After
		• Remote Incident Response: Challenges and Benefits
		• Structured Approach to Incident Response Phases
	Preperation	• Effective Incident Prevention Strategies and Controls
		• Effective Incident Communication Planning in IR
		• IR Architecture: Defense and Zero Trust
		• IR Policy, Plan, and Procedure
		• Efficient Incident Resolution with Management Platforms
	Detection & Analysis	• Detection Engineering: Building Effective Detectors
		• Network Perimeter-level Detection
		• Endpoint Perimeter Detection: Catching Threats In and Out
		• Achieving System-Level Detection with EDR
		• Application-Level Detection: Prioritize, Monitor, Parse
	Containment, Eradication, and Recovery	• Effective Incident Containment Strategies in IR

	Attack Remediation: Eliminating Vulnerabilities and Artifacts	
	System Recovery: Restore, Validate, Monitor	
	Post-Incident Activity	• Post-Incident Review: Lessons Learned Meeting
		• IR Report: Guidelines for Effective Writing
Module 3: Perimeter Defense - Email Security	Email Spoofing	• Email Attack Prevention: Spoofing & DMARC
		• Understanding SPF: Email Authentication Protocol
		• DKIM: Email authentication with digital signatures
		• Protecting Against Email Spoofing with DMARC
	Malicious Attachments	• Malicious Attachments: Risks and Responses
		• Secure Email Attachments: Best Practices
		• Activity - Cuckoo Sandbox Deployment
	Malicious URLs	• Malicious URLs: A Growing Threat
		• Protecting Users from Malicious URLs
		• Activity – Detect Lookalike Domains
	Extra Mile Controls	• User Education: Key to Email Security
		• Measuring User Awareness with Phishing Simulators
		• Activity - GoPhish Deployment
		• Early Phishing Detection Using Honeypots Tokens

		• Activity - Canary Token Deployment
		• Secure Accounts with Multi-Factor Authentication
		• Conditional Access: Location-Based Access Control
		• Email reconnaissance: How attackers gather intel
		• Mail Server Hardening: DISA & CIS
		• Activity - Evaluate your organization's exposed internal mail headers
	Responding to Email Attacks	• Email defenses: Validate, Mitigate and Remediate
Module 4: Forensics Evidence Collection	Memory Acquisition: Live & Dead Systems	
	Disk Acquisition: Encryption & Write-Blocking	
	Triage Image: Efficient Evidence Collection	
	Acquiring Disk Images: Windows and Linux Systems	
	Mounting Forensic Images: Analysis Tools & Techniques	
Module 5: Disk Forensics	Windows Event Logs: structure & Analysis	
	Windows Registry: Structure and Analysis	
	Profiling Windows Systems	
	Collecting Network connections, and devices	
	Tracking User Activity	
	Tracking File Activities: NTFS Forensics	
	Linking User Actions to Files/Folders	
	Detecting USB Device Intrusions	

	Analyzing Installed Applications	
	Analyzing Execution Activities	
Module 6: Memory Forensics	Collecting OS Info	
	Processes Analysis	
	Network Artifact Analysis	
	Detecting Persistence Techniques	
	Collecting NTFS Artifacts	
Module 7: Network Forensics	Traffic Statistics	
	Conversations & Streams	
	Files' Extraction	
Module 8: Threat Hunting and Emulation	Comprehensive Threat Hunting Techniques	• Proactive Human-driven Threat Hunting
		• The Importance of Proactive Threat Hunting
		• Essential Requirements for Effective Threat Hunting
		• Stages of Threat Hunting in Detail
	Elastic SIEM, Kibana, and Advanced Threat Detection	• Elastic SIEM: Modern, Scalable Threat Detection
		• Elastic SIEM: Components and Architecture
		• Starting and Accessing Elastic Stack and Kibana
		• Elastic Agent and Fleet Management Overview
		• Enroll Elastic Agent via Fleet in Kibana

		• Exploring Kibana Concepts and Filtering Data
		• Dashboards and Data Visualization in Kibana
		• Creating a Custom Detection Rule with MITRE ATT&CK Framework
	Proactive Endpoint Threat Hunting and Analysis	• Endpoint Threat Hunting: Proactive Security Measures
		• Endpoint Hunting for Persistence
		• Endpoint Hunting for Lateral Movement
		• Endpoint Hunting for Credential Dumping
	Network Threat Hunting and Intrusion Detection	• Proactively Detecting Threats: Network Hunting Fundamentals
		• Network Hunting for Lateral Movement
		• Network Hunting for Data Exfiltration
